Lanshan District,Linyi City,Shandong Province,China

WPC Ceiling is a kind of ecological wood product, essentially artificial wood. It is a kind of "green wood-plastic composite material", which is mixed with resin, wood fiber material, and polymer material in a certain proportion, does not contain formaldehyde, benzene, and other substances, and is harmless to human health. Ecological wood has the characteristics of waterproof, anti-corrosion, heat insulation, and so on. In the production process of WPC Ceiling, the use of light and heat stability, anti-ultraviolet, anti-low temperature impact, and other modifiers, with strong weather resistance and UV protection ability.
